of Transportation

**National Highway
Traffic Safety
Administration**

400 Seventh Street, S.W.
Washington, D.C. 20590

Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

In-depth Vehicle Occupant Report

The University
of Michigan
Transportation
Research Institute

UMIVOR-UMIVOR-UMIVOR

DISCLAIMERS

This document is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no responsibility for the contents or use thereof.

The opinions, findings, and conclusions expressed in this publication are those of the authors and not necessarily those of the National Highway Traffic Safety Administration.

The crash investigation process is an inexact science which requires that physical evidence such as skid marks, vehicular damage measurements, and occupant contact points are coupled with the investigator's expert knowledge and experience of vehicle dynamics and occupant kinematics in order to determine the pre-crash, crash, and post-crash movements of involved vehicles and occupants.

Because each crash is a unique sequence of events, generalized conclusions cannot be made concerning the crashworthiness performance of the involved vehicle(s) or their safety systems.

Case Vehicle (A): 1998 Ford
 Type: Windstar GL, 4 x 2 wagon
 Driver: 16-year-old male
 CDC: 12-FZLN-1, ØØ-TDYN-3

Situation

(Slide 1) On a clear and dry day, case vehicle (A) was traveling west at a driver-estimated speed of 89-97 kph (55-60 mph) on (slide 2) a gravel road in an agricultural area. When the case vehicle approached a T-intersection, the driver failed to stop the vehicle for a stop sign. (Slide 3) The driver attempted to make a left turn, but case vehicle (A) went off the north side of the road and struck an old wooden utility pole with its front. (Slide 4) The utility pole broke, and the top section came down on the roof of case vehicle (A).

Using the WinSMASH accident-reconstruction program and (slides 5, 6, 7 and 8) c-values measured for case vehicle (A), the following Equivalent Barrier Speed was calculated for the initial frontal impact:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	EBS	12 (7)	-12 (-7)	0 (0)

Exterior Damage

(Slide 9) Overall damage to case vehicle (A) was moderate. (Slide 10) The maximum frontal crush was 5 cm to the right-center bumper. Direct contact damage began 20 cm to the left of the right bumper corner and extended 35 cm to the left. In the front, (slide 11) the bumper was slightly deformed the hood and windshield header were damaged, but there was no damage to the hood latch or hood hinges. (Slide 12) The windshield was cracked and (slide 13) holed due to contact by the falling utility pole. (Slide 14) The maximum roof crush was 16 cm over the left-center second seat passenger area. On the left side, (slide 15) the upper A- and B-pillars, and roof siderail were damaged, and (slide 16) the side rearview mirror was torn off, (slide 17) but there was no significant change in the wheelbase. (Slide 18) The right-front tire was flat, (slides 19, 20

and 21) there was no right-side damage, and there was no significant change in the right wheelbase. There was no damage to the rear of the vehicle.

Interior Damage

(Slide 22) This vehicle was equipped with steering-wheel and (slide 23) passenger frontal-impact airbags, which deployed. (Slide 24) The passenger frontal-impact airbag had a brownish discoloration on its right upper corner. (Slide 25) There was no damage to the steering-wheel rim or (slides 26 and 27) spokes. The steering column was slightly rotated upward and to the right. The following intrusions were noted and measured:

Location	Component	Distance (cm)	Direction
Driver (slide 28)	Roof	5	downward
	Windshield header	5	downward
Center front (slide 29)	Roof	7	downward
	Windshield header	7	downward
Right front	Roof	5	downward
	Windshield header	5	downward
Left second (slide 30)	Roof	16	downward
Center second	Roof	16	downward
Right second	Roof	14	downward

(Slide 31) The left sunvisor was not damaged, but (slides 32 and 33) impact forces damaged the headliner, windshield top molding, and roof console. (Slides 34, 35, 36, 37, 38 and 39) There was no other observable interior damage.

Occupant Injuries and Kinematics

(Slide 40) The 5-ft, 9-in, 120-lb, 16-year-old male driver was reportedly wearing the 3-point belt and the frontal-impact airbag deployed. (Slide 41) The adjustable shoulder-belt anchorage was in the upper position. He reportedly had the seat in the mid track position with the seatback upright. Also, he had the tilt steering wheel in the mid position, with his right hand on the steering wheel and the left hand and arm on the door armrest. The driver reportedly wears contact lenses. He sustained an abrasion to the palmar aspect of his right forearm, probably due to contact by the deploying airbag, or (slide 42) possibly due to contact with the steering-wheel airbag module cover.

(Slide 43) The 5-ft, 9-in, 130-lb, 16-year-old male right-front passenger was reportedly wearing the 3-point belt and the frontal-impact airbag deployed. The right front seat is a fixed seat and has no seat adjuster. (Slide 44) The adjustable shoulder belt anchorage was in the down position. He did not report any injuries.

(Slides 45 and 46) The attached tables summarize the injuries sustained by the two male occupants of case vehicle (A).

Occupant: Driver
Restraints: 3-point belt worn; airbag deployed

Age: 16 years
Stature: 175 cm (5 ft 9 in)

Sex: Male
Mass: 54 kg (120 lb)

Injury Description	A.I.S.	Injury Source		
		Definite	Probable	Possible
Abrasion, palmar aspect right forearm	1		Airbag	Airbag module cover
<u>Maximum A.I.S. Level</u>	1			
<u>Injury Severity Score</u>	1			

Occupant: Right front
Restraints: 3-point belt worn; airbag deployed

Age: 16 years
Stature: 175 cm (5 ft 9 in)

Sex: Male
Mass: 59 kg (130 lb)

Injury Description	A.I.S.	Injury Source		
		Definite	Probable	Possible
No injury				
<u>Maximum A.I.S. Level</u>	0			
<u>Injury Severity Score</u>	0

INTRUSION IT-2

VEHICLE OCCUPANT CONTACT DIAGRAM

INTRUSION IT-3

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.

- | | | | |
|--------------------------|-----------------|----------------------------|--------------------------------------|
| (1) LEFT | (3) RIGHT | | INDIVIDUAL SEAT |
| (1) LEFT | (2) CENTER | (3) RIGHT | BENCH: FULL WIDTH 3 PASSENGER |
| (1) LEFT | (2) LEFT CENTER | (6) RIGHT CENTER (3) RIGHT | BENCH: FULL WIDTH 4 PASSENGER |

Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program that included aerobic, strength, and flexibility exercises. The control group did not participate in any training program. Physical fitness was measured at the beginning and end of the 12-week period using a series of tests including a 1000m run, a 15m shuttle run, a 1min sit-up test, a 1min plank test, and a 1min side plank test. The results showed that the experimental group had significantly higher scores than the control group in all tests at the end of the 12-week period. The findings suggest that a 12-week training program can improve the physical fitness of 10-year-old children.
